

Extended Coverage

Introduction

With SolCyber, our managed security service includes everything you need to immediately raise your security posture and stay resilient. This includes amazing humans running our 24x7 security operations center and a minimum effective dose of technology that provides protection across the kill chain. And we package this in a very modern, easy-to-purchase model.

When we detect threats, our analysts not only triage, investigate and respond to confirmed threats, but they work with you to:

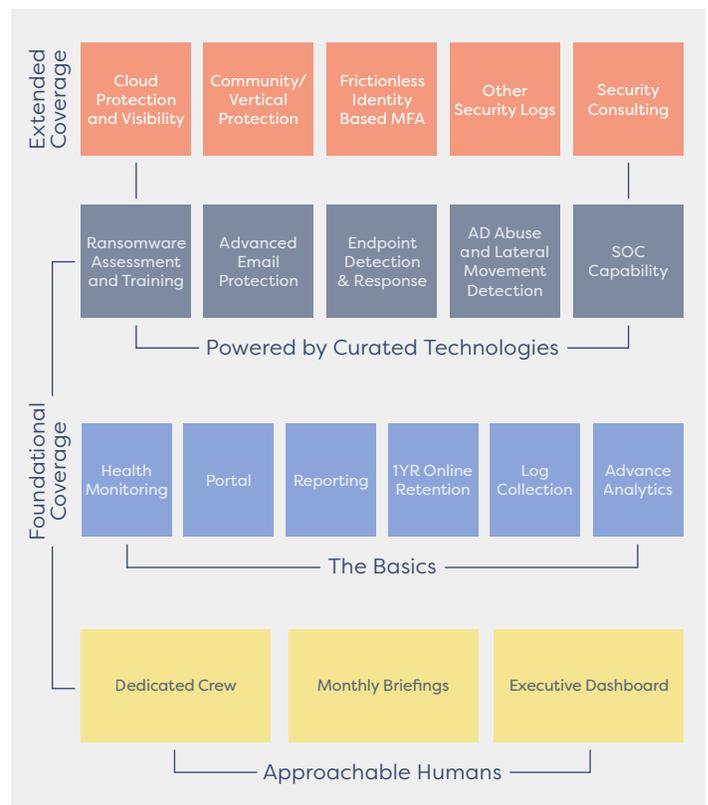

- Understand your current posture and associated risks
- Increase your security posture and level up your employees
- Harden your environment and improve your defenses

We believe every business needs a base set of capabilities, so we've designed Foundational Coverage, where you get everything from 24x7 coverage to a set of curated cybersecurity technologies. But if additional coverage is needed based on specific business needs, then we can address those too.

Extended Coverage

We realize that not all organizations are identical, and in some instances, you may need to bolster your security in specific areas. For example, do you use extensive cloud services or are you part of a regulated industry like healthcare or financial services?

You have the flexibility to customize your SolCyber service stack with Extended Coverage based on your unique environment.

Cloud protection and visibility

Is your business leveraging the cloud to the fullest? While this provides a ton of benefits, it can also create additional risks of cyberattacks—no matter what combination of XaaS you're using. With cloud protection and visibility, our SOC capabilities extend beyond your perimeter, and we'll protect your business with a secure access platform that ensures authorized users—and no one else—have access to the resources they need.

Community and vertical protection

Attackers often run campaigns against a predetermined set of targets, often this is industry focused. Maybe they want to run off with crypto across different exchanges or shutdown power to a country. What if an entire industry could collaborate to defend against these attacks? That's what we enable with community protection – it's powered by technology that shares industry intelligence and feedback in real time.

Frictionless identity MFA

From your personal Gmail account to Office 365, two-factor authentication is everywhere. It's critical to securing your accounts and information. However, you've still got to remember your password and take the time to copy an OTP. Our identity-based authentication service removes all that and allows your employees or users to log in with the built-in capabilities of their smartphone. Facial recognition unlock for work—doesn't that sound awesome?

Additional endpoints

In addition to workstations or laptops, you may have servers or some of your staff may have multiple endpoints. For every user purchased under SolCyber's Foundational services, we give you an additional 25 percent endpoint licenses to deploy. This is enough for most customers, but if you need more, you can buy extended service.

Other security logs

We know security and we know logs. Not every technology is going to provide incremental visibility. And why pay extra for that? If you need logs stored with us for compliance or other needs, we've got you covered. Want to move your Firewall and IDS logs off of Splunk? That's doable, and we'll use them if necessary for security analysis. Just let us know your EPS requirements and we'll manage it for you.

Security Consulting

Does your insurance policy require an incident response retainer to be in place or you want further peace of mind with a regular Red Team exercise? We've got even more amazing people that can help. Choose from set of predefined services or let us know your needs and we can tailor something for a perfect fit.

Keeping things simple is our motto and we apply it to our set of extended services as well. Need an additional security function? We'll provide everything needed to get it done right in a single price. For more information about our Extended Coverage visit www.solcyber.com
