

Our Core Services

Introduction

SolCyber™ is here to help customers protect their businesses from modern security threats. Businesses, whether large or small, face the same sophisticated adversaries. So, how do you defend against nation-state attackers without a Fortune 500 security budget? By partnering with SolCyber.

We assist businesses in making intelligent decisions to effectively defend their organizations against attacks. Utilizing the right combination of tools, services, and expertise, we deliver comprehensive security that everyone can afford.

With SolCyber, our fully managed security program, delivered as a subscription service, includes everything you need to immediately enhance your security posture and remain resilient. This encompasses dedicated professionals overseeing our

24x7 detection and response Security Operations Center (SOC) and a precisely calibrated level of technology for protection across the entire kill chain.

Our objective is to understand where you're at in your security journey and take you where you want to go. You can jump right away to a fully managed program, augment what you have with real human response or simply replace your current MSSP noise machine.

SolCyber offers three core services, our flagship Foundational Coverage, MDR++ and Security Monitoring.

FOUNDATIONAL COVERAGE

SolCyber's Foundational Coverage provides businesses with an all-in-one cybersecurity solution, including curated technologies, licensing and 24x7 detection and response SOC coverage.

- Human-Led Response
- Phishing Simulation and Live Security Training
- Practical Vulnerability Management
- AD Assessment and Hardening
- Advanced Email Protection
- Endpoint Detection and Response
- DNS Protection
- User Behavioral Analytics

In addition to monitoring across all the technologies in our curated stack, Foundational Coverage also includes support for Active Directory, Office 365, and G Suite.

SOLCYBER MDR++

SolCyber MDR++ is designed as a simplified service to get you started on your security program journey. It extends beyond traditional MDR services giving you coverage across proactive posture improvement, malware detection and response and non-malware threat detection.

- Human-Led Response
- Live Security Training
- Expertise On-Demand
- Bundled S1 EDR
- Security Monitoring

As your risk profile changes and new compliance regulations emerge, or as budgets open up to allow for stronger risk mitigation, you can effortlessly upgrade from MDR++ to our comprehensive Foundational Coverage, ensuring a smooth transition to a full security program.

SECURITY MONITORING

If you have an existing MSSP service but want to get onto the path of our fully managed security program subscription, our Security Monitoring service program provides a significantly better experience than your current log monitoring service.

What you get:

- 1 year log retention
- Support for over 500 technologies
- Advanced analytics including user behavioral analytics to highlight non-malware attacks such as insider risk or credential abuse
- User-focus rather than IP/hostnames to make alerts more actionable

Priced in buckets of 50 events per second (EPS), we'll advise on which logs to send over to maximize your detection efficacy. Just note that security monitoring doesn't include any response, so we can't help you fix anything. We recommend looking at our SolCyber MDR++ which includes security monitoring along with full response and a world-class leading endpoint.
