

Customer Case Study:

Navigating Growth: A Strategic Cybersecurity Solution for a Unified Land Survey Leader

**Size:**

900 employees

Vertical:

Land Management

Location:

US

CHALLENGE:

When three companies united to form one of the nation's leading land survey and management organizations, prioritizing cybersecurity became imperative. With ambitious growth plans, the company sought a cybersecurity program offering 24/7 monitoring, scalability, and flexible billing.

To lead this charge, a virtual CISO (vCISO) was enlisted, tasked with crafting a robust security plan within a limited budget and without additional hires.

SOLUTION:

Enter SolCyber's Foundational Coverage—a comprehensive security program exceeding the vCISO's expectations. Our 24/7 SOC team provided continuous protection, eliminating the need for dedicated security personnel. The curated tech stack streamlined implementation and minimized vendor interactions.

Our flexible pricing module aligned seamlessly with the company's growth strategy, enabling easy scalability with user additions, and facilitating monthly billing. This approach established a repeatable process, ensuring immediate and ongoing protection.

OUTCOME:

Collaborating with SolCyber empowered the vCISO to meet client expectations swiftly and affordably. By avoiding the complexities of piecing together a toolset and bypassing the need for a dedicated security hire, the vCISO secured a billing cycle perfectly tailored to current and future needs. Most crucially, he safeguarded his client's information and future endeavors.
