

 **SolCyber™
Security Monitoring**

Introduction

If you have an existing MSSP service but want to get onto the path of our fully managed security program subscription, our security monitoring service program provides a significantly better experience than your current log monitoring service.

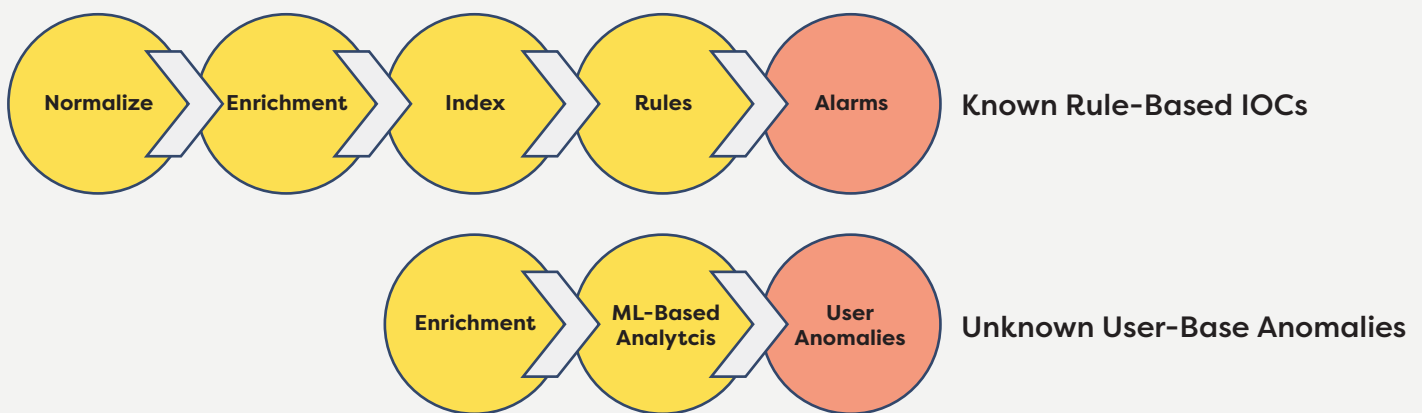

What you get:

- 1 year log retention
- Support for over 500 technologies
- Advanced analytics including user behavioral analytics to highlight non-malware attacks such as insider risk or credential abuse
- User-focus rather than IP/hostnames to make alerts more actionable

Priced in buckets of 50 events per second (EPS), we'll advise on which logs to send over to maximize your detection efficacy. Just note that security monitoring doesn't include any response, so we can't help you fix anything.

We recommend looking at our SolCyber MDR++ which includes security monitoring along with full response and a world-class leading endpoint.

To learn more, contact us at hello@solcyber.com

Our analytics platform not only includes a comprehensive set of IOCs to identify known threats but includes advance analytics to find unknown attacks.
