SolCyber

SolCyber™ XDR++

Introduction

A must-have trifecta of cybersecurity – bundling together managed EDR, advanced email, and security awareness training.

Not every business can immediately opt for a full security program subscription with our Foundational Coverage service. We want to meet you where you are and help get you where you want to be.

No matter if it's driven by supply chains, compliance, or insurance, there is a baseline of security that, these days, is almost mandatory. SolCyber's XDR++ provides coverage of EDR, email, and security awareness training - the security trifecta - as a pre-packaged solution to enable this baseline for any business.

SolCyber XDR++ Inclusions

Human-Led Response

Our Security and Operations Center (SOC) lies at the heart of our services, delivering unparalleled threat detection and response. Unlike other service providers' SOCs, our SOC exclusively comprises Level 2+ analysts, leading all response efforts. This approach leads to reduced false positives and enables us to take precise actions to contain attacks. While we leverage AI and automation to enhance efficiency, our analysts remain at the forefront, ensuring effectiveness in every response.

Expertise on Demand

Never talk to a helpdesk or chatbot – we value your time. Every customer is assigned a named crew including a customer success manager and an analyst who know you and your environment. Reach out any time if you have questions about a current or past security incident, or for general security queries, such as assistance with an audit or 3rd party risk assessment.

Active Directory Assessment

Whether it's on-premise AD, Entra ID, or a hybrid environment, your directory holds the key to the kingdom. An annual assessment helps to minimize the attack surface and drastically reduces the risks of identity abuse.

Your crew will make practical recommendations with the biggest security impact to improve your posture over time.

Bundled Market Leading EDR

The price doesn't just include our services but also licensing for market leaders, CrowdStrike or SentinelOne. We will assist you in deploying and remotely managing these tools, ensuring not only the protection of your systems but also enabling our SOC to respond securely to threats as they occur. Our team knows the platforms so well that a blocking policy is enabled on day 1.

Cover Your Essentials

Our "Trifecta" of security covers your biggest areas of risk: endpoint, email, and people. Over 90% of attacks start with a phishing email intended to trick your users. XDR++ includes both advanced email protection as well as phishing training for all your staff. The advanced email solution not only provides significantly better coverage of malicious attachments and links from O365 or Gmail but also helps protect against email fraud that doesn't involve malware at all. To reduce human risk, your crew will conduct customized phishing simulations quarterly with integrated remedial training.

User Based Pricing

We drastically reduce the complexity of predicting costs by consolidating all costs to a simple per-user model. The per-user pricing includes an extra 25% coverage which enables you to deploy CrowdStrike or SentinelOne to all laptops and servers, or even cloud endpoints, no matter how they're distributed.

Program Flexibility

Looking to acquire, expand your business, or take your company public? As your risk profile changes and new compliance regulations emerge, or as budgets open up to allow for stronger risk mitigation, you can effortlessly upgrade from XDR++ to our comprehensive Foundational Coverage, ensuring a smooth transition to a full security program. The changeover is almost seamless with XDR++ since both it and our Foundational Coverage are priced per-user.
